

The End To Hunger Begins With You

Undernutrition is the single greatest threat to child survival worldwide and the underlying cause of nearly half of all child deaths. Specifically one half of all deaths in children under five years old are attributable to undernutrition. These children are unable to self rely on proper nutrition. However, the problem is that although people want to help, many really do not. Action Against Hunger works to treat and help prevent undernutrition by gathering and sharing data to

educate others to want to join the fight. A generous contribution of 45 dollars can provide a full course of life-saving treatment for an undernourished child. The more people that take the time educate, the quicker both hunger and malnutrition and hunger can be completely put to an end. Join the fight. Help end hunger today by working to fill the stomachs of those who need it the most.
